

Peer Review for Cequence Application Security Platform

Vendor Overview

“Sick Of Nosey SDK Bot Mitigation Products? Use Cequence AI.”

Submitted: November 24, 2020

★★★★★ Overall User Rating

Product(s): Cequence Application Security Platform

Overall Comment: “Cequence AI Bot Defense product outshines the rest with it’s most prominent feature: You don’t need to integrate an SDK. It’s quickly deployed into an AWS infrastructure with multiple options to take a feed of your traffic with real time decisions based on policies you write. Or even better, CQ Prime operates as a service to extend your Security team’s time, reach, or potential gaps in knowledge. You get an easy to use dashboard to perform threat hunting, build passive policies, then promote them to full mitigation mode with ease.”

Lessons Learned

What do you like most about the product or service?

No SDK required. It’s drop in and drop out if you ever need to bypass it.

What do you dislike most about the product or service?

Not yet compatible for GCP infrastructure. The build in reporting could use some polish.

Please explain the business problems or needs that prompted the purchase of this product or service.

We need something quickly integrated into the business with low friction capable of solving noisy bots.

If you could start over, what would your organization do differently?

Be sure to better understand all of your endpoints, cookies, and API endpoints. Ask your devs 3x just to be sure there’s nothing older still active.

What one piece of advice would you give other prospective customers?

They have a proof of value that makes this hard not to try if you have a problem to solve.

Evaluation & Contracting

Why did you purchase this product or service?

- Create internal/operational efficiencies
- Cost management
- Improve compliance & risk management

What were the key factors that drove your decision?

- Strong consulting partnership
- Strong customer focus
- Strong services expertise
- Product functionality and performance

Which other vendors did you consider in your evaluation?

- Other...
- Akamai
- Cloudflare
- PerimeterX

Integration & Deployment

How extensively is this product being used in your organization?

Specific divisions, regions, or business units

When was this product or service deployed at your organization?

2020

How long did your deployment take?

0 - 3 months (<3)

What was your implementation strategy?

Worked with just the vendor
